

BULLETIN NO. 20/21-003 DATE: 09 Aug 21

TO: ALL ISR Drag Racing Affiliates

SUBJECT: Leather or Ballistic Nylon suits / Parachutes

Effective August10, 2021

SPECIAL NOTICE:

2021 / 2022 Drag Racing Driver Protection / Parachutes.

Drag Racing.

It has come to our attention that supply chain availability and material shortages due to Covid 19 affects on certain industries, have made sourcing specialized Ballistic Nylon garments, certain brands of Leathers, and nylon and other materials used in parachute construction have caused difficulty for drivers to conform to the current rules on various pieces of personal equipment in the 90 day timeline .

We understand that certified personal safety equipment and some parachute components are very limited in availability and have extended delivery wait times.

Considering this ISR is removing the mandatory requirement for the following Drag Race rules updated April 2021.

Driver Protective Equipment.

#10. Leather or Ballistic Nylon suits recommended to be worn in Outlaw and Pro Extreme 55 class sleds that have the potential to exceed 125 miles per hour, ~~and mandatory in~~ Outlaw and Pro Extreme 55 class that achieves 135 miles per hour.

Frame and Body

#14 Parachutes are recommended for Outlaw and Pro Xtreme 55 sleds that can achieve 125 miles per hour ~~and are mandatory for~~ Outlaw and Pro Extreme 55 sleds that can achieve 135 MPH or better.

All competitors are encouraged to use the best quality equipment available in these critical areas. It is strongly suggested that Nylon or Leather suits and up to date certified parachutes be used if available. However, since the marketplace is very constrained, ISR is removing the mandatory component of the above stated rules.
