

BULLETIN NO. 14/15-015 DATE: 20 Feb 15

TO: ALL ISR Youth Racing Affiliates

SUBJECT: Max-Torque, Kitty Cat Clutch Blue Spring

Blue Max-Torque Kitty cat spring

The wire diameter can vary as we have found out with our spring suppliers. The wire can be .057 +/- .001. Originally we had called for .054 but when stainless steel got in slim supply a few years back they were taking larger wire and not drawing it down as much as historically but able to get the same engagement which is critical.

The most important thing is where does engagement occur which is tested daily on five random clutches that we are assembling.

If any issues occur the tech person can freeze the class number or bag, the clutch and ISR will send it out and test for engagement and if they have been altered we will let you know. They would be no charge for the service.
